Project Design Phase-I
Proposed Solution Template

Date	24 September 2022
Team ID	PNT2022TMID39283
Project Name	University Admit Eligibility Predictor
Maximum Marks	2 Marks

Proposed Solution Template:

S. No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Designing a college prediction/prediction system and giving administrators a probabilistic view of college administration for overall rating, college cut-offs, admission intake, and student preferences are the problems that are being addressed.
2	Idea / Solution description	With the aid of our project, the HSC will shortlist universities for undergraduate study. The anticipated results will give them a good idea of their chances of admission to a particular university. Students who are preparing or will be preparing can gain more insight from this analysis. Students will benefit from learning more about the university's research opportunities, admissions requirements, course offerings, and notable alumni.
3	Social Impact / Customer Satisfaction	With this solution, students' panic and worry about being accepted into their ideal school will decrease. Students can check their chances of getting into the university of their choice. Students can save time by predicting admission in this application. It assists the students in every step of the application process for the university or college of their choice. Make direct connections between students and universities to cut out the middleman.
4	Novelty / Uniqueness	The proposed application will include the admission requirements of all institutions because it appears that there are no applications or websites that are widely used to anticipate a student's eligibility for college. The computerization of the entrance seat allocation procedure and the reduction in processing time compared to the current system are the project's key benefits.
5	Business Model (Revenue Model)	Technology is making higher education institutions work harder with less funding, as it is in most aspects of the educational world today. Institutions are under more and more pressure to accept more students, keep them, and do everything they can to guarantee their success. Students use it, and they can quickly select the college of their choice. This project helps these institutions reduce their own pressure in addition to relieving pressure on students.
6	Scalability of the Solution	With the aid of your information and a little dose of reality checking on your academic performance and CGPA, this will also assist you in deciding on your ideal university and provide you with a realistic path. Conversely, we have experts who will work with you to increase your chances of obtaining offers by making sure that the colleges to which you apply do not deviate from your profile and, most importantly, your aim. It can be scaled for use at universities throughout.
